EDUCATION

B.Tech — Computer Science 2025 – 2029 KIET Group of Institutions · AKTU

SKILLS

Blockchain Solidity · Ethereum · Smart Contracts · MetaMask · Remix IDE

AI / ML Python · HuggingFace

Web HTML · CSS · JavaScript · React (learning) · Flask · MongoDB · SQLite · Firebase **Tools** Git ·

GitHub · Vercel · Render · VS Code · LeetCode

Game Dev · Unity · c# · UI

PROJECTS

Sentinel The fraud detection system Mar 2026 [Python](#) · [Solidity](#) · [Ethers.js](#) · [Flask](#) · [HuggingFace](#) · [Vercel](#) · [Render](#)

- Built **Sentinel**, an AI-driven blockchain transaction monitoring system that detects suspicious Ethereum transactions using behavioral and transaction-based risk factors.
- Engineered a real-time fraud scoring pipeline leveraging wallet metadata, transaction frequency, gas usage, and account age to classify transaction legitimacy.
- Developed a responsive dashboard for transaction interception, fraud analytics, and security insights, improving transparency in blockchain ecosystems.
- Showcased the project as a practical solution for fraud prevention and risk assessment in decentralized finance (DeFi) environments.

Flappy Bird clone [unity](#) · [c#](#)

- Developed a 2D endless runner game inspired by Flappy Bird using Unity and C#, implementing physics-based player movement and collision detection.
- Designed obstacle spawning and procedural level generation systems to create dynamic and replayable gameplay experiences.
- Implemented score tracking, game-over logic, restart functionality, and UI management to enhance user engagement.
- Optimized gameplay mechanics, including pipe movement, difficulty progression, and responsive controls, delivering a smooth gaming experience.

Habi-doro 2025 [html](#) · [css](#) · [javascript](#)

- Developed **Habi-Doro**, a productivity web application combining habit tracking, Pomodoro focus sessions, task management, and progress visualization in a unified dashboard.

- Implemented habit streak tracking, monthly calendar analytics, and GitHub-style heatmaps to help users monitor consistency and productivity over time.
- Built an interactive focus timer with Pomodoro, short-break, and long-break modes, along with focus mode and task management features for distraction-free work sessions.
- Designed a responsive glassmorphism-inspired UI with dark/light theme support and persistent client-side storage using LocalStorage for seamless user experience

EXPERIENCE&ACHIEVEMENTS

- Built & deployed a full-stack blockchain project showcased to dignitaries.
- Solved 50+ LeetCode problems.
- built & deployed a unity game.
- working on second game on unity.
